

Features

- Ideal for commercial landscape, sports fields, parks, golf roughs, and residential lawns
- Dark green color
- Medium fine texture
- Semi-dwarf growing habit
- Excellent disease resistance

Benefits

- Fast recovery from injury
- Superior wear resistance
- Better ability to recover from stress than other tall fescue mixtures
- High levels of endophytes which offer a natural resistance to many surface feeding insects
- Proven Brown Patch resistance

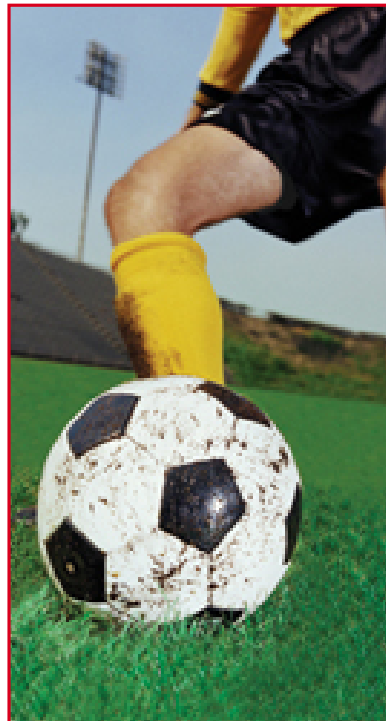

Seeding Rates

- New turf: 4-5 Kgs/100m² or 400-500 Kgs/Ha
- Overseed rate: 3-4Kgs/100m² or 300-400 Kgs/Ha

Phone: 03 94620340

Whether you're growing grass for commercial landscape, sports fields, parks, golf roughs, or residential lawns, **Defiance XRE with rhizomes** is the key to robust, beautiful turf.

Rhizomes give plants the ability to spread densely across large areas and provide strong knitting ability, enabling easier sod lifting.

Defiance XRE is a tall fescue blend featuring Grande. Grande is the only tall fescue with rhizomes to be granted Plant Variety Protection (PVP) certification. The high incidence of rhizomes in Grande, combined with other improved tall fescue varieties, gives **Defiance XRE** faster recovery from injury, superior wear resistance and better ability to recover from stress than other tall fescue mixtures.

In addition to rhizomes, **Defiance XRE** also has very high levels of endophytes, which give it a natural resistance to many surface feeding insects.

Characteristics

Defiance XRE has rich dark green color and proven Brown Patch resistance. The roots of **Defiance XRE** reach deep into the soil for exceptional water absorption and less frequent irrigation. **Defiance XRE** also relies less on chemical input than comparable mixtures, giving you an environmentally friendly answer to the ongoing challenge of providing hearty lush turf for your clients.

Establishment

- Emergence in 7-10 days under ideal conditions
- First mowing in 21-30 days
- First limited use in 60-75 days
