

PASTURE BOOSTER

Quick + Permanent Pasture Seed Blend

- ✓ *Tetraploid Ryegrass for vigour and productivity.*
- ✓ *Perennial Ryegrasses for long term yields.*
- ✓ *Highly palatable.*
- ✓ *Proven performance*
- ✓ *Higher productivity*

A blend of three forage ryegrasses which have different maturity dates providing three peaks of production, together with Tetraploid ryegrass, White Clover and a sub-clover. Ideally suited to 525mm plus Rainfall areas.

Mixture Analysis

(% by count)

DOMINION Perennial Ryegrass Blend	40
Tetilla Tetraploid Ryegrass	35
White Clover	15
Sub Clover	10

Pasture Booster is formulated for rapid growth and high productivity. It is ideal for winter production of hay or grazing, particularly in the first year of sowing.

RAINFALL

PASTURE BOOSTER BLEND performs best in medium to heavy soils, receiving at least 575mm winter based rainfall or irrigation. However **PASTURE BOOSTER BLEND** will provide significant production even in light soils and down to 300mm winter rainfall.

SOWING

Sow **PASTURE BOOSTER BLEND** with adequate soil moisture in early autumn at 10—20 mm. Seed bed should be well prepared and firm for maximum production.

SOWING RATES

Sow at between 20 kg and 30kg per hectare. For surface sowing or poor seed beds use higher rates.

FERTILIZER

Use soil testing to plan your fertilizer needs. Drilling with a starter fertilizer gives seedlings immediate access to nutrients to achieve great winter growth. Yields will be further improved by applications of nitrogen.

Advanced Seed has put together all aspects of seed quality (in particular the concept of *pure live seed - PLS*) in setting a standard called High-Vitality or Hi-Vi seed. In addition to varietal selection, a major contributing factor to the final result of sowing is seed quality. Critical to quality is seed germination (viability) and mechanical purity.

Advanced Seed packages and distributes under the conditions of the SIAA Code of Practice. For more information contact the company.
