

# DOUBLE TETRAPLOID TURF-TYPE PERENNIAL RYEGRASS

## What is DOUBLE?

**DOUBLE** is a new turf type of tetraploid perennial ryegrass bred especially for rapid installation and unique stress tolerance. Traditional turf type perennial ryegrasses have two sets of chromosomes, whereas tetraploids have four sets. **DOUBLE** is one of the varieties in the 4TURF brand.

## Features:

- Superior in dry conditions
- Allround disease resistance
- Rapid germination in cool temperatures
- Stronger, deeper, denser root system - provides better wear tolerance

## Benefits:

- Double the chlorophyll for energy production and increased stress tolerance
- High vigour for fast establishment
- Deeper, denser rooting, increased drought tolerance
- Superb colour
- Improved germination and growth at cooler temperatures

## Fight against stress

Tetraploids have long been known to show better stress and disease tolerance compared to diploids. Now these advantages are also available in a turf grass variety: **DOUBLE**. In particular in dry conditions **DOUBLE** outperforms diploids. **DOUBLE** is one of the varieties in the 4TURF brand.

## Disease resistance

Improved disease resistance is observed for rusts, Fusarium and Drechslera.

## Improved salt tolerance

**DOUBLE** has better salt tolerance than most diploids. Have **DOUBLE** in mind when establishing new turf areas!

## Seeding Rates:

- New Establishment: 4-5kg / 100m<sup>2</sup>
- Overseeding Dormant Warm Season Grasses: 3-4kg / 100m<sup>2</sup>
