

## LAPRIMA @ HOTHLYN RESERVE

The City of Hume in the Northern Region of Metropolitan Melbourne have been a big supporter of our range of LaPrima Couch Blends. Pictured right demonstrates a blend of 70% Veracruz & 30% LaPrima. At the time this picture was taken (1st Feb 2010), the field had been sown for approximately 8 weeks.

On inspection it was evident that the aggressive nature of LaPrima and it's fast establishment capabilities were to the fore. Within the stand, the Veracruz with it's higher density and lower growing characteristics could be identified easily and as time passes it will continue to improve the texture and density of the turf stand.

Pictured left is an example of the Veracruz / LaPrima Blend growing over bare areas.

Stay tuned for more great results from other LaPrima Club Members !
