

LAPRIMA XD @ WESLEY COLLEGE

Rob Savedra, the Head Groundsman at Wesley College in Glen Waverley, Melbourne, wanted to establish a warm season grass in a large area in front of the newly completed sports pavilion.

The oval had been sprayed with Coliseum herbicide after the football season to eradicate the cool season grasses and promote the existing common couchgrass. La Prima XD couchgrass (La Prima/Veracruz) blend was chosen and sown in early November in an attempt to get an adequate cover by early December when a Campus Speech Night was scheduled on the field. The weather, however, in November 2009 was cool with soil temperatures low, and this slowed the germination of the seed. Shade cloth was used in certain areas to hold moisture and after 2 months the couchgrass was starting to show good lateral growth with a full cover taking 10-12 weeks.

As you can see La Prima XD has proved a successful option at Wesley College !

LaPrima XD @ 4 Weeks

LaPrima XD @ 6 Weeks

LaPrima XD @ 10 Weeks
