

# RHIZING STAR

## TALL FESCUE

Rhizing Star is a new and improved, heat and disease resistant tall fescue variety developed for superior turf quality across a wide range of adaptation. Rhizing Star is a dark green, moderately fine textured variety that exhibits excellent wear tolerance, improved turf density and resistance to Brown Patch. It quickly forms a strong dense turf because of its rhizomatous root system. Rhizing Star is endophyte enhanced for added disease resistance.

Rhizing Star is recommended for permanent turf in full or partial shade on golf course roughs and low maintenance sites. It is an excellent choice for sod growers. It can be utilised in polyspecies grass seed mixtures maintained at a moderate height of cut.

### Features and benefits:

- Good drought tolerance
- Good disease resistance
- Excellent wear tolerance
- High endophyte level
- Very good density
- Dark green colour
- Requires little thatch management

### Uses:

- High traffic conditions
- Parks and reserves
- Sod turf growers
- Golf courses

### Mowing height:

- 37.5mm-75mm

### Application:

- New sowing: 3-4kg per 100m<sup>2</sup>
- Oversewing: 2-3kg per 100m<sup>2</sup>
