Summer Couch Blend

If you are after a fine textured lawn capable of withstanding a dry hot Summer then LaPrima Couch, Rye & Fine Fescue is perfect for you.
La Prima Couch is widely acknowledged as the best drought tolerant grass available. The addition of both Ryegrass & Fine Fescue provides all year growth and colour. Best sown in Spring/Early Summer, this blend will sustain in the toughest of conditions.

XXXXXXXXXXXXXXXXXXXXXXXXXXX"

Seed Mixture By Count

70%	LaPrima Couchgrass
20%	Fine Fescue
10%	Turf Type Ryegrass

New Sowing: 1.5-2.5kg / 100m2
Oversowing: use approx half new sowing rate

TEN STEPS TO A GREAT LAWN

1. Remove any undesirable grass types or weeds.
2. Lightly till soil if necessary.
3. Add a quality soil such as sandy loam where required to a depth of 100-150mm. Remember your lawn will only perform as well as the soil it is grown in.
4. Level area in preparation for seeding, allowing sufficient fall for water run off.
5. Carefully measure your area, (length x width) to ensure you have the correct amount of seed for your project. Remember insufficient seed could result in a sparse lawn.
6. Apply a suitable turf starter fertilizer (NPK) to ensure your young seedling has sufficient nutrient to establish.
7. Carefully select your lawn seed taking into account your desired objectives. Sow seed at the recommended label rates and remember better results are not gained by using excessive amounts.
8. Lightly rake and or roll the area to ensure your seed is in contact with the soil. Be sure not to bury your seed, 3-5mm depth is sufficient.
9. When your lawn requires mowing remember to remove only 1/3 of the leaf at any one time and follow suggested mowing heights.
10. To remain healthy and strong your lawn will require adequate amounts of fertilizer and watering. We strongly advise to over-sow your lawn 1-2 times per year to maintain a dense lawn.
