

WEARMASTER TURF SEED BLEND

Wearmaster Ryegrass Blend combines the drought and salt tolerance of SR4660 ST and Bonneville, with the many benefits of Tetraploid turf ryegrass, such as strong wear and disease tolerance.

Seed Mixture By Count:

30% SR4660 ST Turf Type Ryegrass
30% Bonneville Turf Type Ryegrass
40% Tetraploid Turf Type Ryegrass

Seed Varieties:

SR4660 ST is a new variety that has superior seedling and natural plant salt tolerance, as well as a rapid spreading tiller production for turf recovery.

Bonneville is a quick establishing low growing variety that has improved salt tolerance and a dark green colour.

Tetraploid turf ryegrasses are bred for rapid establishment and unique stress tolerance. Tetraploids have shown better disease and wear resistance than diploids.

Sowing & Establishment:

For new sowing, a rate of 3-4kg per 100m² is recommended. For oversewing, a percentage of this rate should be applied proportionate to the amount of existing turf cover. For moderate existing cover, apply at half the new seeding rate.

During sowing activity, a complete starter fertiliser is recommended at label rates to initiate rapid establishment.

Maintenance:

Wearmaster Blend can be mowed as low as 10mm, however the recommended mowing height in most applications is 25mm.

Seasonal application of a balanced NPK fertilizer is recommended to sustain a healthy sward.
