

DOUBLE TETRAPLOID TURF TYPE PERENNIAL RYEGRASS

What is DOUBLE?

DOUBLE is a new turf type of tetraploid perennial ryegrass bred especially for rapid installation and unique stress tolerance. Traditional turf type perennial ryegrasses have two sets of chromosomes, whereas tetraploids have four sets. **DOUBLE** is one of the varieties in the 4TURF brand.

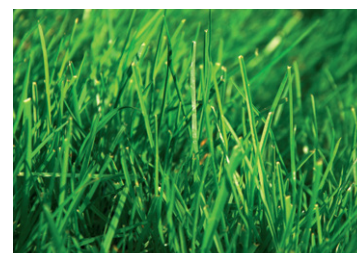

Features:

- Superior in dry conditions
- All-round disease resistance
- Rapid germination in cool temperatures
- Stronger, deeper, denser root system - provides better wear tolerance

Benefits:

- Double the chlorophyll for energy production and increased stress tolerance
- High vigour for fast establishment
- Superb colour
- Improved germination and growth at cooler temperatures

Fight against stress

Tetraploids have long been known to show better stress and disease tolerance compared to diploids. Now these advantages are also available in a turf grass variety: **DOUBLE**. In particular in dry conditions **DOUBLE** outperforms diploids.

Disease resistance

Improved disease resistance is observed for rusts, Fusarium and Drechslera.

Improved salt tolerance

DOUBLE has better salt tolerance than most diploids. Have **DOUBLE** in mind when establishing new turf areas!

Seeding Rates:

- New Establishment: 3-5kg/100m²
- Overseeding Dormant Warm Season Grasses: 3-4kg/100m²

DOUBLE TETRAPLOID TURF TYPE PERENNIAL RYEGRASS

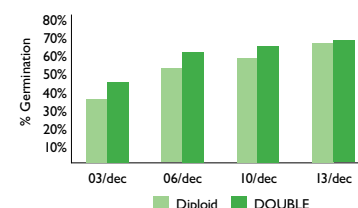

Stronger establishment

DOUBLE larger seeds contain more energy reserves for a stronger faster establishment and healthy plant development. When the weather cools down DOUBLE doesn't. DOUBLE continues to germinate. DOUBLE has a better germination at 4°C compared to diploid. This is also a big advantage when overseeding.

Germination at 4°C
Sowing date November 21st

Drought tolerant

DOUBLE's natural water reserves in the plant ensures that it stays green longer. DOUBLE's superior rooting structure helps it look for water and reduces the need for additional irrigation of established turf.

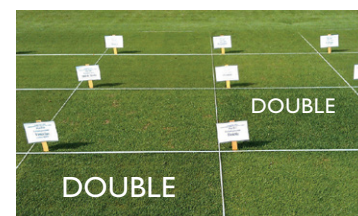

Exceptional disease resistance and winter performance

DOUBLE gives you green ground cover during the most difficult period of the year because of improved energy reserves. During autumn and winter seasons DOUBLE shows improved tolerance to diseases.

Excellent colour

DOUBLE has a deeper glossier dark green colour than traditional varieties. Its improved stress tolerance throughout the year and its increased resistance to weed invasion means that DOUBLE will be greener quicker and for longer than traditional varieties of perennial ryegrass.
