

F130D COMMERCIAL ADAPTABLE BROADCAST SPREADER

The EV-N-SPRED[®] Dual Port PRO Adjustable Shut-Off System is included on all Professional models and allows the operator to balance the spread pattern evenly across the full 180° spread width, regardless of the weight or size of granular material. By closing either the right and/or left side throwing ports, you can balance the spread pattern to exacting precision without compromising spread width to application rate.

Engineered for extremely accurate application rates, easy operation and long life, with the EV-N-SPRED[®] FLEX-SELECT Interchangeable Tray System, you can select one of three optional uniquely suited “trays” which include precision engineered apertures and shut-off systems for multiple materials and output rates. Spread a wide range of materials accurately, effectively and economically.
