

ALL SEASON KIKUYU BLEND

WITH GRANULAR
WETTING AGENT

With the likelihood of a long hot summer, it is important to have a Seed Blend capable of surviving on minimal irrigation or rainfall.

Rapid Green's All Season Kikuyu Blend combines Perennial Ryegrass which establishes quickly and gives the turf excellent wear tolerance, with Turbocote Kikuyu to provide summer drought tolerance.

Our Turbocote technology contains a moisture absorbent coloured coating that increases germination and establishment performance. It's unique formulation consists of a combination of biostimulants and seaweed concentrate fertiliser that greatly assists in the seedlings ability to absorb nutrients in the soil, improve root and shoot development and recover from wear and stress events.

Seed Mixture By Count:

- 90% Perennial Ryegrass
- 10% Kikuyu (Turbocote)
- + 10% by weight – Granular Wetting Agent

Application:

- New Sowing: 3-4kg/100m²
- Oversowing: use approximately half new sowing rate

Ten steps to a great lawn:

- 1 Remove any undesirable grass types or weeds.
- 2 Lightly till soil if necessary.
- 3 Add a quality soil such as sandy loam where required to a depth of 100-150mm. Remember your lawn will only perform as well as the soil it is grown in.
- 4 Level area in preparation for seeding, allowing sufficient fall for water run off.
- 5 Carefully measure your area, (length x width) to ensure you have the correct amount of seed for your project. Remember insufficient seed could result in a sparse lawn.
- 6 Apply a suitable turf starter fertiliser (NPK) to ensure your young seedling has sufficient nutrient to establish.
- 7 Carefully select your lawn seed taking into account your desired objectives. Sow seed at the recommended label rates. Better results are NOT gained by using excessive amounts.
- 8 Lightly rake and or roll the area to ensure your seed is in contact with the soil. Be sure not to bury your seed, 3-5mm depth is sufficient.
- 9 When your lawn requires mowing remember to remove only 1/3 of the leaf at any one time and follow suggested mowing heights.
- 10 To remain healthy and strong your lawn will require adequate amounts of fertiliser and watering. We strongly advise to over-sow your lawn 1-2 times per year to maintain a dense lawn.
