

# SR 4660ST TURF TYPE PERENNIAL RYEGRASS

SR 4660ST Turf Type Perennial Ryegrass is an endophyte enhanced ryegrass with extremely high levels of salt and drought tolerance.

SR 4660ST has demonstrated excellent traffic tolerance which makes it superior for use on sports fields, as well as parks. The spreading growth habit increases the recovery of wear.

The high summer performance due to its drought and stress tolerance make it ideal for permanent turf. Yet SR 4660ST has also shown excellent performance as a grass for overseeding couch grass with superior winter growth.

Excellent germination and growth with saline water enables SR 4660ST to be used in marginal sites.

- 100% Turf Type Perennial Ryegrass

#### Features:

- Excellent in dry conditions
- Excellent in shady areas
- Moderate in heat tolerance

#### Benefits:

- Has excellent traffic tolerance perfect for superior use on sports fields and parks
- High drought and stress tolerance – ideal for permanent turf

#### Uses:

- Backyard
- Lawn
- Turf

#### Seeding Rates:

- New Sowing: 5kg/100m<sup>2</sup>
- Oversowing Existing Lawn: use approximately half new sowing rate

#### Establishment:

- Germination (in optimal conditions): 7-10 days
- Establishment rate (in ideal conditions): 3 weeks
