

TransOut

TURF ANNUAL RYEGRASS

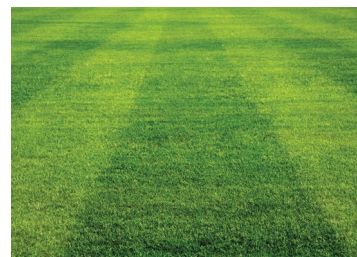

TransOut is a dwarf annual ryegrass that shows less vertical growth and finer leaves than existing annual ryegrasses.

Features:

- Rapid germination
- Mid to dark green colour
- Excellent wear tolerance
- Strong winter activity

Benefits:

- Ideal for winter oversowing of dormant couchgrass
- Improved germination and growth at cooler temperatures
- Quick spring transition

Seeding Rates

Seedling germination can be expected in 5 to 7 days after sowing. A recommended oversowing rate for warm season grasses is 150-400kg/hectare depending on wear usage.

Mowing

Recommended mowing height for TransOut is 13 to 50mm. Generally application of a balanced fertiliser containing nitrogen will maintain vigour, density and turf quality. If winter wear is a priority apply nitrogen in autumn and winter, rather than spring.
