

TURBOSTRIKE

TURBOSTRIKE

TurboStrike is as close to a performance guarantee as you can get for your seed investment. It is a revolutionary new biostimulant seed treatment that nurtures plants through the most critical stages of early development.

Grass gets off to a faster, stronger start to form healthier stands of turf right from the beginning. You can walk on it, play on it, and work on it sooner than you could with untreated seed. If you've never used a seed treatment, TurboStrike is the best choice.

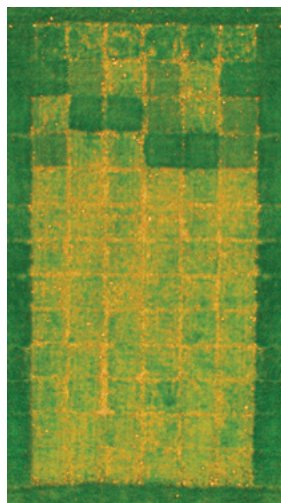

Features and benefits:

TurboStrike enhances the excellence of your seed's genetics, and is proven to:

- Increase the speed of germination
- Develop greater biomass more quickly
- Promote greater tillering
- Accelerate plant development
- Elevate resistance to various plant stressors

Proven performance

Trials comparing seed treated with TurboStrike to untreated seed validate its performance. See reverse side for trial data.

Aerial view of test plots comparing treated, untreated and coated Kentucky bluegrass seed illustrates the accelerated plant development TurboStrike delivers.

TURBOSTRIKE

TURBOSTRIKE

Trials comparing seed treated with TurboStrike to untreated seed validate its performance. TurboStrike is a biostimulant and seaweed treatment that promotes rapid water absorption into the seed, activates beneficial soil bacteria and delivers phytohormones for accelerated plant establishment.

The proof is in the performance. Tall Fescue trial data below:

Plant germination data

Increased Germination by 33% in 15 Days

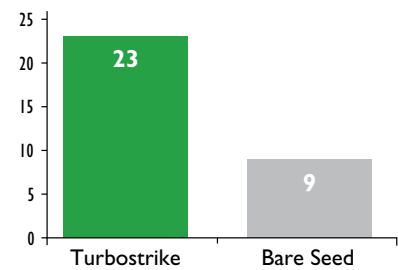

Fast Germination and Establishment with Water Complexing:

TurboStrike contains compounds that facilitate Water Complexing. This unique characteristic holds water next to the seed hull for rapid absorption and carries the biostimulants into the seed stimulating the radicle for faster germination; positively impacting plant establishment in the earliest stages.

Total number of tillers

Increased Tillering by 150% in 35 Days

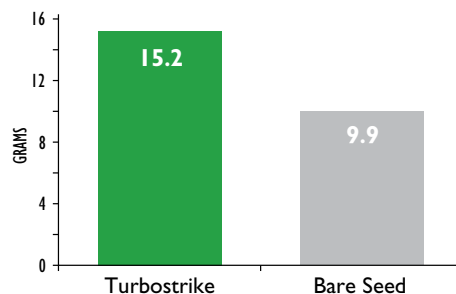

TurboStrike Contains Both Humic Acid and Soluble Seaweed Extract:

- The **humic acid** in TurboStrike is a natural chelator. It stimulates the soil Micro-Flora, which convert mineral elements into plant available nutrients.
- Soluble **seaweed extract** is the natural source of phytohormones absorbed by the radicle at emergence, stimulating a growth response. The extract contains cytokinins, auxins and gibberellic acid promoting tillering as well as rhizomatous and stoloniferous growth.

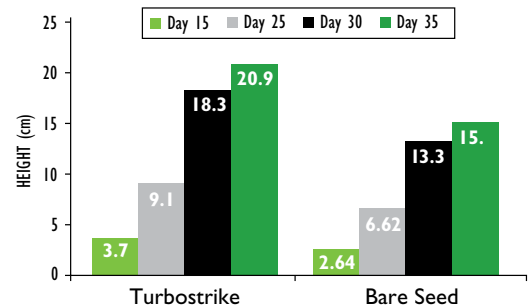

Biomass Comparison

Increased Biomass by 54% in 35 Days

Plant height data (cm)

Increased Plant Height by 35% in 35 Days
