

WEARMASTER TURF SEED BLEND

Wearmaster Ryegrass Blend combines the deep green colour of Black Pearl and the fast establishment of Homerun LS, with the many benefits of Tetraploid Turf Ryegrass, such as strong wear and disease tolerance.

Seed Mixture By Count:

- 30% Black Pearl Turf Type Ryegrass
- 30% Homerun LS Turf Type Ryegrass
- 40% Tetraploid Turf Type Ryegrass

Seed Varieties:

Homerun LS is a new variety that has superior seedling and vigour, as well as a rapid spreading tiller production for turf recovery.

Black Pearl is a new release variety that combines high turf quality with deep green colour and wear tolerance.

Tetraploid turf ryegrasses are bred for rapid establishment and unique stress tolerance. Tetraploids have shown better disease and wear resistance than diploids.

Sowing and Establishment:

For new sowing, a rate of 3-5kg per 100m² is recommended. For oversowing, a percentage of this rate should be applied proportionate to the amount of existing turf cover. For moderate existing cover, apply at half the new seeding rate.

During sowing activity, a complete starter fertiliser is recommended at label rates to initiate rapid establishment.

Maintenance:

Wearmaster Blend can be mowed as low as 10mm, however the recommended mowing height in most applications is 25mm.

Seasonal application of a balanced NPK fertiliser is recommended to sustain a healthy sward.
